

Le Spinners

RECREATIONAL HUB · PWA UI/UX

A mobile-first booking app for pickleball courts and table tennis tables. Members and non-members book a slot, pay by GCash, submit proof, and chat with staff about that booking — while admins verify payments, manage schedules and keep the hub running.

ON THIS CANVAS

Overview & journey	Journey, status model, privacy
Design system	7 boards + 3 components
User · Sign in, home & booking	Screens 1–8
User · Payment & verification	Screens 9, 25–33
User · Bookings, chat & profile	Screens 10–12, 34–36
Admin · Desktop	Screens 13–24, 37–44
Admin · Mobile	Key admin flows on a phone
States & edge cases	Empty, error, conflict, offline...

Booking journey

Book → Pay → Submit proof → Staff verifies → Confirmed. Dashed lines show what happens when proof is rejected or a hold runs out.

Booking status model

Seven statuses. Arrow colour shows who moves a booking forward.

- Player action
- Staff action
- Automatic (timer or clock)

WHAT OTHER PLAYERS SEE

TEMPORARY, REJECTED → On hold · may reopen
PAYMENT_SUBMITTED → Unavailable
CONFIRMED → Booked
EXPIRED, CANCELLED → Available again

Never names, amounts or proofs.

Only the server changes a status. The app sends actions (reserve, upload proof, release, cancel, approve, reject). The server checks the booking's current status and the person's role first, then changes it and logs who did it and when.

Visibility, privacy & notifications

What each person can see, who gets told what, and the server rules that keep payment proofs and chats private.

WHO SEES WHAT			
INFORMATION	THE PLAYER · OWN BOOKINGS	OTHER PLAYERS	STAFF
Slot status	Full status, e.g. TEMPORARY HOLD · 07:12 left	Available, On hold · may reopen, Unavailable, Booked, Maintenance	Every status, with names
Who booked a slot	Only their own name	Never — no "Juan is paying"	Yes
Payment screenshot	Their own, in the app	Never	Yes, through a link that expires in 5 min
GCash ref. and amount	What they typed	Never	Yes, next to the amount due
Booking chat	One thread per own booking	Never	All threads, each tied to its booking
Phone and email	Their own	Never	Yes
What they can change	Reserve, upload proof, release a hold, cancel 24 h+ ahead	Nothing on others' bookings	Approve, reject with a reason, cancel, block slots · all logged

SERVER RULES · WORKERS + HONO + D1

1

Check ownership on every request.

A booking, proof or chat loads only for its player or for staff. Hiding it in the app is not enough.

2

Keep screenshots private.

Private storage (e.g. an R2 bucket), no public URLs, signed links that expire in 5 min. Strip location data on upload.

3

Status changes only on the server.

The app sends actions; the server checks the current status and role, then updates D1.

4

Staff-only routes.

Admin API routes sit behind a staff-role check in Hono middleware, and the admin screens are never linked from the player app.

5

Public availability is anonymous.

It returns slot states only: no names, amounts or proofs.

6

Honest payment words.

An upload is "Payment proof submitted", never "Payment received". Only staff approval shows "Payment verified".

7

Audit log.

Approvals, rejections, cancellations and blocks are saved with the staff name and time.

WHO GETS TOLD WHAT					
EVENT	PLAYER		STAFF		
	In-app	Email	In-app (bell)	Email	SMS
Booking created · slot held	"Pay within 10 min"	—	New booking	—	—
Hold has 2 min left	"Will expire soon"	—	Hold expiring	—	—
Payment proof submitted	"Waiting for admin verification"	—	Needs verification	Yes, with Review Booking link	QUEUED UNTIL PROVIDER IS SET
Payment verified · confirmed	"Booking confirmed"	Yes, with ticket	—	—	—
Proof rejected	Reason + resubmit link	Yes, with reason	—	—	—
Booking expired	"Booking expired"	—	—	—	—
New chat message	Unread badge	—	Unread badge	—	—
Booking cancelled	"Booking cancelled"	Yes	Cancelled	Yes	—
— means not sent. Player notifications never mention other players; staff notifications link straight to the booking.
