Under 2 minutes the upload action moves up next to the timer so it's one tap away.

SCREEN 27

Payment countdown

Always visible under the header while the booking is TEMPORARY. Impossible to miss, never alarming: calm blue until the last two minutes, then amber with one clear sentence. No red, no flashing.

Server owns the clock

The API returns `expiresAt`; the app only counts down to it and re-syncs on focus. Reopening the app never resets the timer.

Proof submitted in time

Timer disappears. Status becomes Payment verification and no longer expires on the 10-minute clock.

Screen readers

role="timer" with aria-live off; announce only at 5:00, 2:00 and 1:00 — not every second.

At 2:00

Amber state + one sentence. An in-app notification fires if the player has left the screen.

At 0:00

Slot released to everyone, booking EXPIRED, player lands on the Booking expired screen.

Mid-upload

If the upload started before 0:00 the server accepts it; the player is never punished for a slow network.
